# RECOGNIZE A VALID VARIABLE WITH LETTERS AND DIGITS USING LEX AND YACC

#### AIM:

To recognize a valid variable which starts with a letter followed by any number of letters or digits.

#### **ALGORITHM:**

## Lex (exp6.l):

- 1. Recognizes letters, digits, any single character, and newline.
- 2. Returns tokens for letters, digits, and single characters.
- 3. Indicates the end of input with yywrap().

# Yacc (exp6.y):

- 1. Includes headers and defines global variables.
- 2. Declares tokens digit and letter.
- 3. Defines grammar rules for identifiers.
- 4. Handles syntax errors with yyerror().
- 5. The main function, obtain the input, parses it, and prints if it's recognized as an identifier.

## **PROGRAM:**

## exp6.l:

Roll Number: 210701105 Name: Karan Balaji R S

```
}
exp6.y:
%{
  #include<stdio.h>
  int yylex();
  int yyerror();
  int valid=1;
%}
%token digit letter
%%
start: letter s
     letter s
s:
   | digit s
%%
int yyerror(){
  printf("\nIts not a identifier!\n");
  valid=0;
  return 0;
}
Roll Number: 210701105
Name: Karan Balaji R S
```

```
int main() {
    printf("\nEnter a name to test for an identifier: ");
    yyparse();
    if(valid) {
        printf("\nIt is a identifier!\n");
     } }
OUTPUT:
```

```
-(kali⊛kali)-[~/Documents/cdlab]
└$ vi exp6.y
 -(kali®kali)-[~/Documents/cdlab]
s yacc -d exp6.y
 -(kali® kali)-[~/Documents/cdlab]
__svi exp6.l
 —(kali®kali)-[~/Documents/cdlab]
_s lex exp6.l
 —(kali⊗kali)-[~/Documents/cdlab]
$ cc lex.yy.c y.tab.c
 -(kali®kali)-[~/Documents/cdlab]
└_$ ./a.out
Enter a name to test for an identifier: 1variable
Its not a identifier!
 —(kali⊛kali)-[~/Documents/cdlab]
_$`./a.out
Enter a name to test for an identifier: variable1
It is a identifier!
```

#### **RESULT:**

Thus, a program using lex and yacc tool is implemented to recognize a valid variable which starts with a letter followed by any number of letters or digits.
